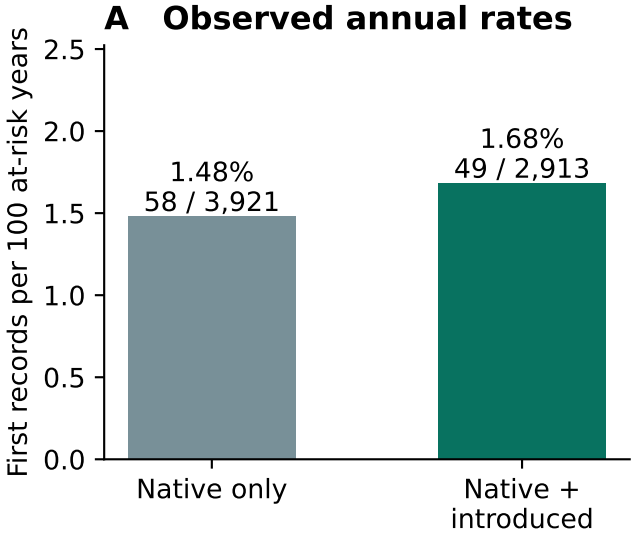
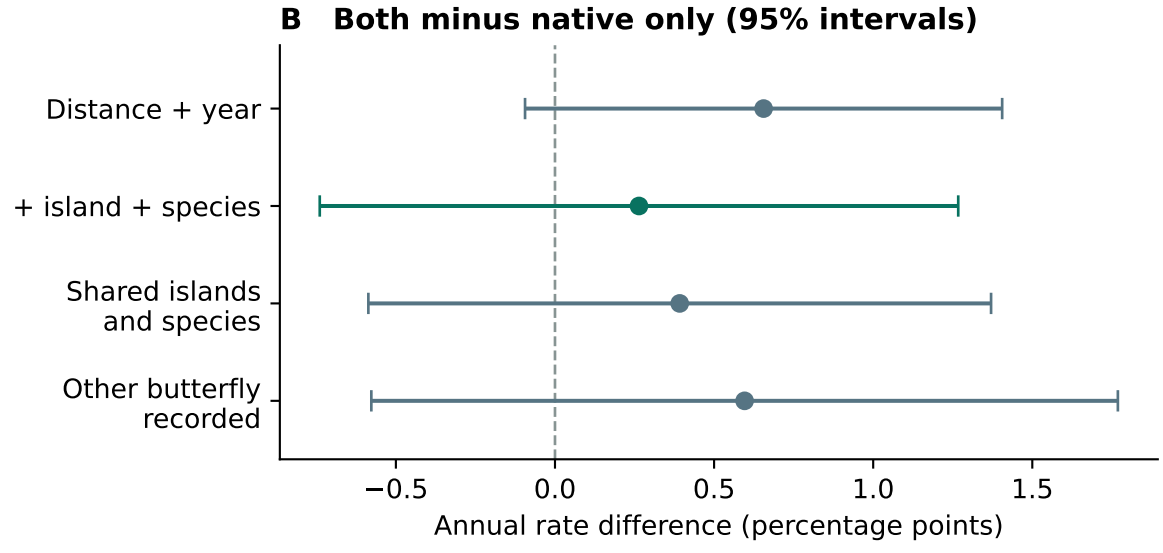
Does an additional introduced host predict island butterfly first records?

27 islands × 132 species screened; native-host comparison: 21 islands, 98 species, 107 first records.





Both exposure groups contributed within 14 islands and, separately, within 55 butterfly species.

Hosts recorded at island ports, 2001–2010; first butterfly records, 2011–2024. Unconfirmed hosts can still be present.
