Where a host record preceded a larva and a neighbouring island record

All nine sequences within 250 km · 5 potential relay islands · 3 migrant-listed species · 8 distinct first records

Butterfly	Port host[1], 2001–10	Island A	Records by year	Island B	km
Colias croceus	*Lotus corniculatus*	Ireland	2017 → 2019	Isle of Man	165
Danaus plexippus	*Calotropis gigantea**	Hawai‘i	2012 → 2020 (◆) → 2021	Moloka‘i	192
Danaus plexippus	*Calotropis procera**	Maui	2018 → 2021	Moloka‘i	41
Danaus plexippus	*Calotropis procera**	Sint Eustatius	2015 → 2018	St Kitts	35
Danaus plexippus	*Calotropis procera**	Sint Eustatius	2015 → 2019	Antigua	127
Danaus plexippus	*Calotropis procera**	Sint Eustatius	2015 → 2021	St Croix	194
Vanessa cardui	*Nicotiana glauca**	Maui	2016 → 2024	Moloka‘i	41
Vanessa cardui	*Nicotiana glauca**	Maui	2016 → 2017	Hawai‘i	156
Vanessa cardui	*Brassica rapa**	Vancouver I.	2020 → 2023	Whidbey	202

Green = larva on A. Purple diamond = observed egg-laying on A. Brown = first indexed record on B since 2001.

[1] One compatible host per sequence. * Introduced in the botanical region. Feeding on the named plant was not observed in this analysis.

Relay islands / species / sequences **≤100 km: 2 / 2 / 3** • **≤250 km: 5 / 3 / 9** • **≤500 km: 9 / 7 / 19**

Distances join representative island port locations. A shared year on B can appear twice when two islands qualify as A.
